Testing disposePage
    Tests the accuracy of the disposePage function in the Buffer Manager Class
Small buffer test
    Tests if the buffer will still function if it is of only size 1.
Stress Test
    Tests the buffer with a very large amount of pages.

For implementing BufMap, we chose to use two parallel vectors because you can
resize the vectors as needed while the programs running which is very helpful when
you don't know what the size of your buffer actually is from inside the function.
It also supports access by indeces which makes it easier to keep two arrays parallel.
